*helps*

# How RL goes

Slowing down = worse models = losing arms race

Personal experience: infrastructure issue.

Conducted **16** Interviews with:

- Alignment & RL researchers @ Big2 labs [10]
- Freelance writers, contractors, project leads, labelers [6]

# What is Likert?

Likert is a **Reinforcement Learning from Human Feedback (RLHF)** company.

Likert helps labs:

- Find model weaknesses
- Generate training data
- Collect human preferences from thousands of labelers
- Evaluate and audit models

***“Linear for RL”:***

- Tickets = Model misalignments
- Automation Hooks = Automated human labeling & training runs
- Resolving Tickets = Success on eval

# UX Demo (lab view)

|--------|----------------------------|---------------------|---------|------------------------|--------|-----------|----|--------|--------|
| t-103  | Overuse of Rounded Corners | Slide generation    | Running | Collecting Preferences | medium | N/A → N/A | 0  | jane   | 31 Aug |
| t-102  | Says racial slurs          | Assistant Responses | Stopped | Waiting                | high   | N/A → N/A | 0  | arda   | 30 Aug |
| t-101  | Test Ticket                | Slide generation    | Stopped | Waiting                | medium | N/A → N/A | 0  | arda   | 30 Aug |

## Market Facts

Labs dislike vendors:

- trust issues
- extremely expensive
- label quality is poor
- slower iteration speed
- alignment drifts

[BIG LAB] **started** own labeling campaign:

- 2,000 → 50,000 labelers in 2026
- 70-100\$/hr, 40hrs/week
- NO onboarding infrastructure
- hundreds offboarded every week.

**25x**

**Headcount in '26**

**\$80/hr**

**Avg. labeler wage**

**50,000**

**active labelers**

# Market

**\$1T**

TAM

**\$75Bn**

SAM

**\$5.2Bn**

SOM

---

**Initial market: 63 new unicorns**

**\$2.2Bn addressable @ current valuations**

**120 Companies**

(105 neolabs + 15 frontier)

**\$100Mm / year per frontier lab**

(est. from Surge’s \$1.2B ARR from ~12 labs)

**\$384Bn**

Combined Valuation of 105 Neolabs
